BIA ANALYSIS

This device is able to measure more parameters and evaluate more specific details of your health because of the advanced hardware installed and using the **BIA-Analysis** (*Bio-electrical impedance Analysis*).

Uses BIA BIOELECTRICAL impedance measurement Sensors (GSR).

- Body mass index
- Fat
- Moisture rate
- Muscle mass
- Bone weight and density
- Basal metabolic rate
- Visceral fat
- Intracellular water
- Cardiac and heart condition evaluation
- Stroke risk evaluation
- Hydration

DYNAMIC HEART RATE MONITOR & HRV ANALYSIS

Indicate your heart rate range and fatigue state, detect critical abnormality.

- Real time dynamic and continuous heart rate with atrial fibrillation detection;
- Heart Rate Zones.

* THIS FEATURES MAY NOT BE AVAILABLE IN SOME COUNTRIES.

ECG MONITORING

Measure and record anytime

We use a high performance ECG chip from Maxim Technology which accurately collects original Heart signals that enable Cardio-Learn, a neural network algorithm.

AI analysis is available to detect 5 types of arrhythmias.

* THIS FEATURES MAY NOT BE AVAILABLE IN SOME COUNTRIES.

The dynamic ECG is generated in the APP and supports playback.

MEASURE ANYTIME & ANYWHERE ATRIAL FIBRILLATION DETECTION

We use **PPG** technology with high frequency sampling to collect an accurate pulse waveform which is then subject to detailed data analysis and processed using medical algorithms to identify atrial fibrillation.

LIPOSOME TECHNOLOGY

UNCOATED LIPOSOME

SSD TECH COATED LIPOSOME

Lipid matrix

Chitosan

Active molecule

BENEFITS

Low toxicity

Use of natural polysaccharides, biocompatible and biodegradable.

Muco-adhesiveness

The muco-adhesiveness avoids the involuntary swallowing and allows the sublingual absorption, by which the substances directly spread into the blood by allowing lower quantities of drugs, thanks to the reduced dispersion of the product, normally caused by the first-pass metabolism.

Increase in liposomal stability

In physiological conditions: protection against factors that degrade liposomes (e.g. pH of the gastrointestinal tract, bile salts, pancreatic lipases) In storage conditions: contrast of the high tendency of liposomes to degrade and aggregate.

ADVANTAGES OF CBD DELIVERY THROUGH SSD-TECH COATED LIPOSOMES

PRODUCT-WISE

Liposomal formulas (including spray ones) with CBD content available on the market: **oil-based**

- Available in **oil-based**, so liposoms tend to aggregate
- About **60-70% dispersion**, due to the firstpass effect
- **Difficult dosage** due to the density of the oilbased solution
- **Shorter expiry** of the active principle within the liposomes (ca. 2 months after opening)
- **Bad taste**

CBD SSD- Tech COATED LIPOSOMES

- Available in **water-based solutions**, with no collateral effects
- Increased effectiveness, due to:
 - **muco-adhesiveness**, which avoids the involuntary swallowing and allows the sublingual absorption
 - **no first-pass effect** :substances directly spread into the blood by allowing lower quantities of drugs, thanks to the reduced dispersion of the product, normally caused by the first-pass effect.
- **Increased life** of the product (about. 18 months after opening)
- **No bad taste**
